PROJECTS

Coffee House — Venture Viability Analysis

Worked as Major COO in the venture team. The project explores an AI/computer-vision based system for grading coffee beans after harvest, supported by a digital platform, cloud dashboard and API integration. Contributed to venture analysis, validation, revenue-model thinking and go-to-market planning.

Android Music App

Academic Android application project focused on building a music-oriented mobile experience and applying Android development concepts.

Online Shopping Cart

Academic application project focused on product and order handling, cart functionality and structured data management.

YouTube App

Academic mobile application project based around a video-content browsing experience and Android application concepts.

CERTIFICATIONS

Python • Java • RDBMS • Software Testing

ADDITIONAL

Interested in entry-level opportunities across software development, Android development, database-oriented work and software testing.
